[1] GPS only. [2] Requires a subscription to a TerraStar data service. [3] RMS, incremental error growth from steady state accuracy. Post-processing results using third party software. [4] Under ideal conditions that include proper static alignment and in-field dynamic motions during loss of GNSS signal. [5] Calibrated in whole operational temperature range, in homogeneous magnetic environment, for latitude up to ±65 deg. [6] Dynamic accuracy may depend on the type of motion. [7] The environmental protection ratings apply only to the device in its protective case. The OEM version may not meet these standards. [8] Weight and size are PN dependent. Customers should obtain the most recent 2D/3D files before designing any interface hardware.
